

# Automated Gas Permeameter

**Brand:** OFI Testing Equipment, Inc.  
**Product Code:** 127-80  
**Availability:** 1

## Description

The Automated Gas Permeameter is designed to measure the permeability of core specimens 1.5" in diameter and up to 4" in length. The core specimen is placed into a quick access core holder with a stationary core boot. Confining pressure constrains the core inside the boot while gas flows through it. Dual auto-switching mass flowmeters measure the flowrate of the gas through the core. The software controls the confining pressure and inlet pressure on the core while calculating the permeability.

### Features

- Measures permeability of a core sample
- Quick access core holder with stationary boot makes loading and unloading the core sample quick and easy
- Dual auto-switching mass flowmeters provide greater accuracy over the measurement range
- Software controls confining pressure and gas inlet pressure while calculating and recording permeability over time

### Software Features

- Controls confining pressure and gas inlet pressure
- Records confining pressure, mean pressure, inlet pressure, and outlet pressure
- Customer test builder provides detailed control over test parameters

### Specifications

- Confining Pressure: 10,000 psi (69 MPa)
- Gas Inlet Pressure: up to 115 psi (793 kPa)
- Flowrate Range: 0 - 500 sccm (dual scale)
- Temperature: Ambient
- Core Diameter: 1.5" (4 cm) - other sizes available
- Core Length: up to 4"
- Size: 27" x 21" x 21" (69 x 53 x 53 cm)
- Weight: approximately 180 lb (81.6 kg)

### Requirements

- Gas: Helium or Nitrogen - up to 115 psi (793 kPa)
- Air: up to 140 psi (965 kPa)
- Electrical: 115/230 VAC, 50/60 Hz

### Part Number

- #127-80
